

# Source Code Driven Security Assessment

Could your company's bottom line use a little boost? [Start here](#)

**SoftwareSecure**

## Could your company's bottom line use a little boost?

**M**ost software firms waste hundreds of thousands of dollars by taking a reactive approach to application security. The occasional test or scan might look good up-front. But it inevitably leads to even more substantial cost down the road for repairs, incidence response and litigation caused by simple security breaches that could have easily been avoided. This direct out-of-pocket expense is often a mere fraction of the cost resulting from the damage to consumer confidence and corporate stock valuation when word hits social networking spheres and the media.

At Software Secured, we adhere to the age-old wisdom that an ounce of prevention is worth a pound of cure. Our popular source code driven security testing helps organizations boost quality and, in turn, dramatically shrink the true direct and indirect cost associated with web application threats, vulnerabilities and attacks.

Working seamlessly and cost-effectively with your in-house development and engineering team, Software Secured delivers a deep source code driven security assessment to J2EE, ASP.net and C++ applications. Enjoy scalable and customized services from a trusted and highly specialized outsourced partner that can quickly identify vulnerabilities in your software, whether under development or already in production.

Our unique approach pairs state-of-the-art static code analysis tools with years of specialized experience and meticulous manual code analysis. We can then work with your organization to educate and train personnel on the latest web application security threats and issues along with today's best practice design and deployment processes. So your in-house team is better equipped to safeguard your assets going forward.

**Isn't it time you closed vulnerabilities before the next breach depletes your bottom line?  
Call 613 899 4121 to learn more or to schedule a free initial consultation, today!**

Sincerely,

Sherif Koussa  
President, Software Secured
